

R, Shiny and the Oasis Loss Modelling Framework

Mark Pinkerton

mark.pinkerton@oasislmf.org

1. Oasis vision
2. Oasis tech stack
3. Oasis use of R and R-Shiny,
with a worked example

Oasis vision

- To be the main “alternative” platform for the insurance sector, and the main platform for non-insurance catastrophe model use.
- To be a focal point for community engagement and standards in the area of catastrophe modelling.
- By being open and curating open source software, to enable a wide community to innovate and scale the world of catastrophe modelling.

Oasis projected model coverage 2016

Over 70 models from 12 providers

1. Oasis vision
- 2. Oasis tech stack**
3. Oasis use of R and R-Shiny,
with a worked example

Architectural goals

1. Configurable and pluggable

- ability to support any model or calculation methodology

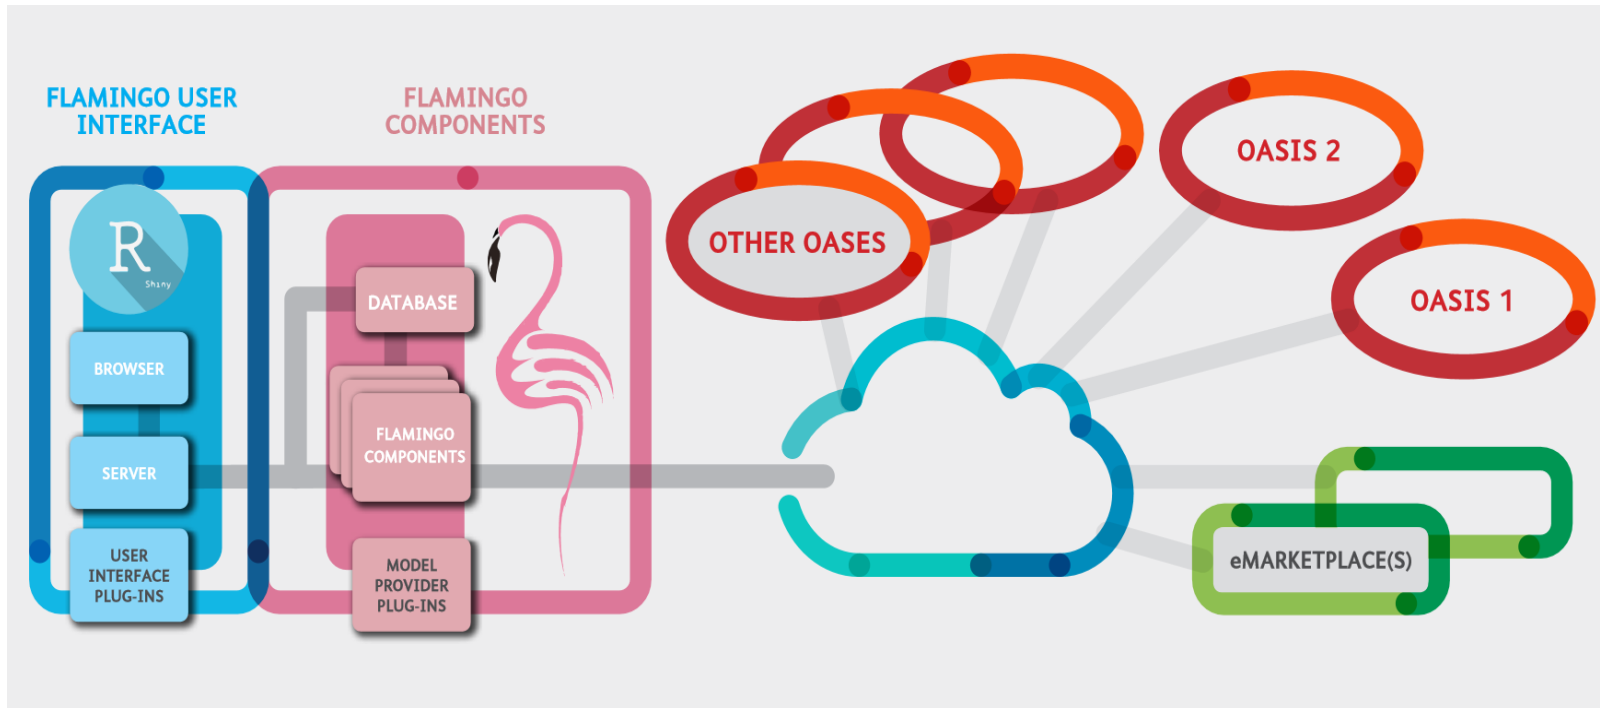

2. Range of deployment options

- insurance enterprise systems through to academic model development or consulting projects

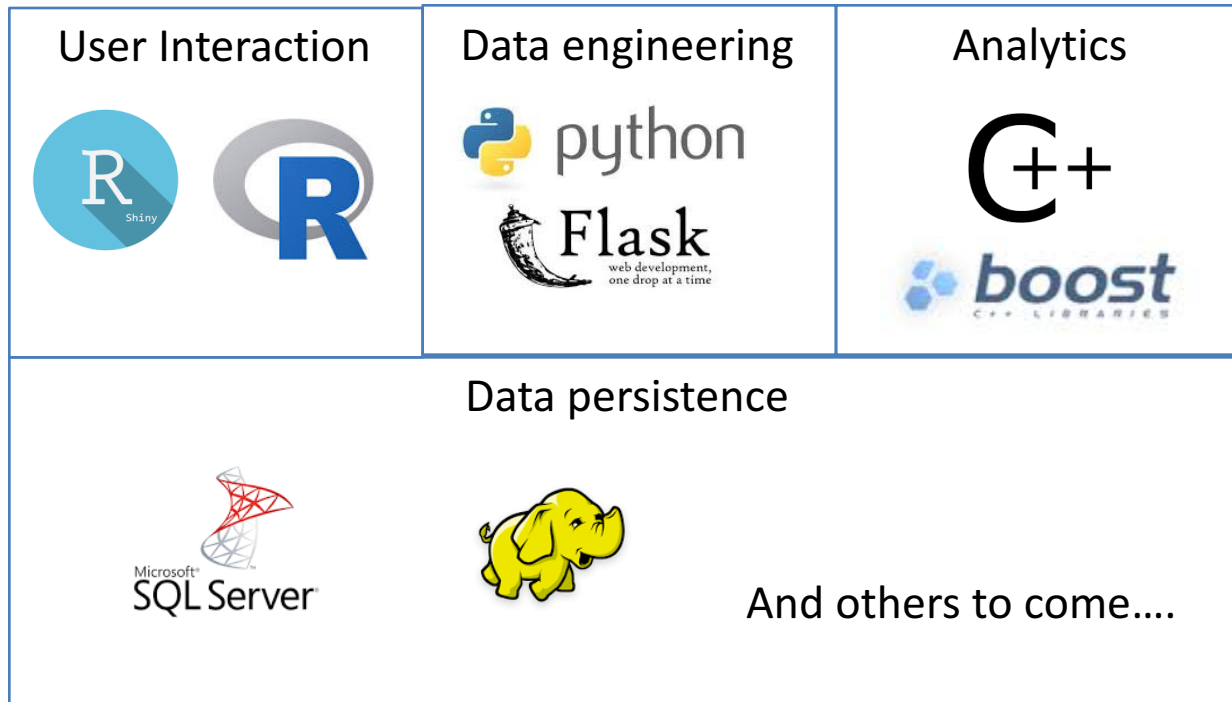

3. High performance

- can run industrial strength model in acceptable times

Oasis Eco-system

Oasis Technology Stack

1. Oasis vision
2. Oasis tech stack
3. **Oasis use of R and R-Shiny,
with a worked example**

Use case 1 – analytic workstation

- Model developers, power analysts
- Direct invocation of Oasis components from R
- Combine existing R code and expertise...
 - ... with high performance analytics and industry standard methodologies

Use case 2 – cat modelling platform

- Cat modellers, underwriters
- Use R-Shiny web application, or interface with existing risk applications using Oasis API
- Hosted platform this summer, for use by 10+ Lloyd's managing agents, and in-house deployments at multiple (re)insurers

Shiny demo –background

- Catastrophe models use an event catalogue to represent a particular peril
- Much of the correlation in loss is captured in an event footprint
- Uncertainty in the modelled losses can be categorized as:
 - Primary uncertainty
 - event selection and frequency
 - Secondary uncertainty
 - hazard and vulnerability uncertainty conditioned on a particular event
 - Parameter uncertainty

Shiny demo

Summary

1. Oasis vision

- Main “alternative” platform for insurance, and main platform for non-insurance
- Community engagement and standards catastrophe modelling
- Using open source software to drive innovation and scale in the world of catastrophe modelling.

2. Oasis tech stack

- Based on open technologies and frameworks
- Hosted environment for Lloyd’s MAs this summer
- Going open source in 2016

3. Oasis use of R and R-Shiny

- R/Oasis integration for power analytics
- R-shiny application for Oasis platform
- Strong potential for expanded use of R in the cat modelling community
